

# BITE PROBLEMS

**A BITE PROBLEM ARISES WHEN THE THREE PARTS OF YOUR CHEWING SYSTEM - YOUR TEETH, YOUR JAW JOINT AND YOUR CHEWING MUSCLES - CANNOT FUNCTION IDEALLY BECAUSE OF THE WAY YOUR TEETH FIT TOGETHER. OVER TIME, THE STRESS A BITE PROBLEM PUTS ON YOUR CHEWING SYSTEM MAY LEAD TO MUSCLE AND JAW JOINT PAIN AS WELL AS HEADACHES, RINGING IN YOUR EARS AND WORN, BROKEN OR LOOSE TEETH.**

## FREQUENTLY ASKED QUESTIONS

### 1. What causes a bite problem?

A bite problem is caused by your upper and lower teeth rubbing against each other irregularly when you are chewing and meeting unevenly when you close your mouth.

### 2. What can I do to minimize my risk of future bite problems?

The first step in addressing a bite problem is to have your dentist evaluate your individual risk factors and customize an appropriate Management Protocol for you.

Your Bite Problem Management Protocol may include:

- Wearing a Kois Deprogrammer to determine your most relaxed jaw position
- Treating an unbalanced bite by:
  - Reshaping your teeth by "equilibrating" or restoring your teeth
  - Orthodontically moving your teeth

The Management Protocol for bite problems has important steps that you must carry out on your own to address your particular bite problem.

### 3. What will happen if I choose to do nothing about my bite problem?

If left untreated, bite problems may lead to chronic head and neck pain, jaw joint problems and destruction of your teeth.
